

RE: Docket 02-98 Ne wAmateur Allocation

Sirs,

I fully support the addition of the 60 meter band to Amateur frequency allocations. Crowding in the present 75 and 40 meter bands would be diminished.

It will also be a great band for HF experimentation and give a welcomed propagation bridge between 3.5 and 7 megahertz.

In spite of some comments, it is my opinion that sub-bands are not necessary. In fact making this a non-contest band will encourage use on a year round basis.
